Coding Test - 1

Q1) Design a program that takes a String input 's'. It must check whether the given string is a palindrome or not. 's' can consist of all possible characters included in the ASCII table and more

Constraints:

$0 < s.length < 2 \times 10^{(5)}$

Example:

i.) Input:- 'abcd efgh hgfe dcba'

　 Output:- 'True'

ii.) Input:- 'hello123321hello'

　 Output:- 'False'

Q2) Given n non-negative integers a1, a2, ..., an , where each represents a point at coordinate (i, ai). n vertical lines are drawn such that the two endpoints of the line i is at (i, ai) and (i, 0). Find two lines, which, together with the x-axis forms a container, such that the container contains the most water.

Notice that you may not slant the container.

Constraints:

n == height.length

2 <= n <= 105

0 <= height[i] <= 104

Example:

i.) Input: height = [12,3,7,9,2,8,5,10,6]

Output: 70

Q3) Prerequisite reading :-

<u>Vigenère Cipher</u>

You are each given a set of strings numbered '1' and '2'. Along with that, you are provided with a Vigenère table and a set of 'substring keys'.

Your 3rd task is to find the first index of each occurrence of the given substrings in String 1.

Taking the indexes, you must find the characters present in the 2nd string at the locations you got from your first result. You shall see that they will make up a repetitive Vigenère key.

You must use the key and decipher the original substring keys given to you.

For this last part of deciphering, we are going to help you out by providing a generator function, that will create a 2d-array of the Vigenère table which can be accessed in your program. You must design a function that takes a string and the key you found out as input, and use the table to decipher it accordingly.

Constraints:

$0 < s1.length < 2 \times 10^{7}$

$0 < s2.length < 2 \times 10^{7}$
